

Longitudinal Grounded QA

Q: Are there any abnormal findings in the pleura? Answer in relation to the prior study.

A: New consolidative opacities are noted in the **right upper** and **right middle lobes**. Small **bilateral pleural** effusions are new in the interval. New patchy **bibasilar** airspace opacities are noted.

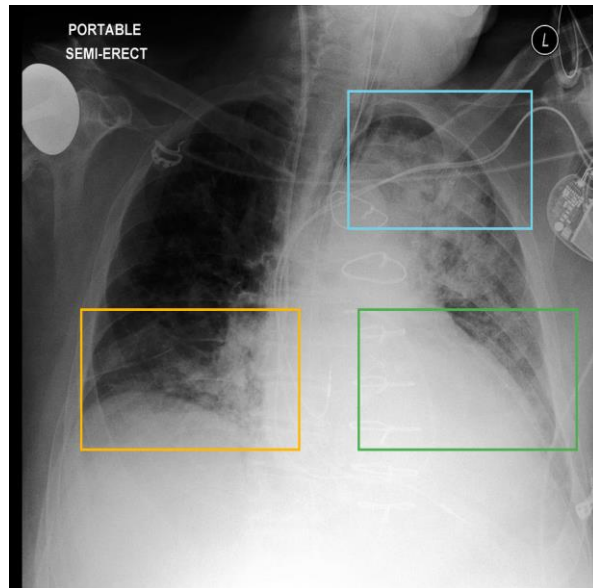

Referring Question Answering

Q: Are there any tubes, lines, or ports in or near the cardiomeastinum **<cardiac structures>** **<mediastinum>** ?

A: The swan-ganz catheter is seen with its tip terminating within the right ventricle.

Single-study Grounded QA

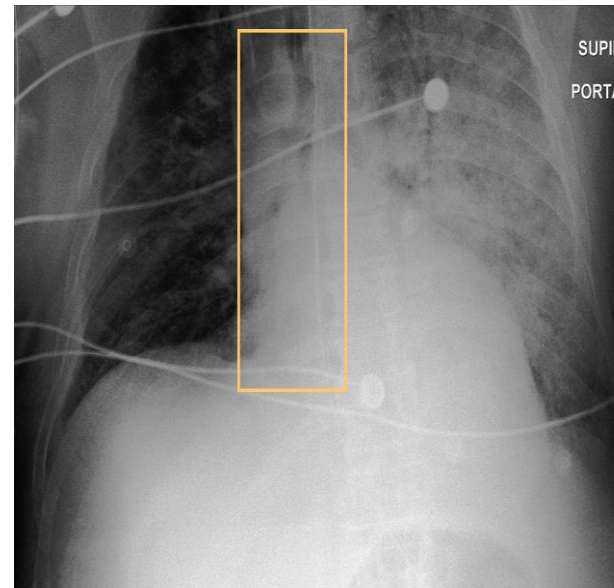

Q: Describe any abnormal findings.

A: The following findings are observed:

- There is a **left retrocardiac area** which may represent underlying infiltrate and/or pleural effusion.
- There is a confluent area of opacity in the **left upper lobe**.
- There is opacity at the **right base**.

Anatomical Grounding

Q: What's the location of the right atrium in the X-ray?

A: On the image, you can find the right atrium at **<right-atrium>**.
